

NEW! The Ace 500 HDMI Transmitter / Receiver Set

Introducing the Ace 500, an affordable zero delay wireless video system for budget conscious videographers.

Built with the same reliable wireless technology found in the industry standard Bolt product line, the Ace 500 offers an ultra-light, streamlined experience at a more accessible price point.

Ace 500 transmits uncompressed 1080p60 video up to 500ft. line of sight at less than 1ms delay. What makes Ace 500 more versatile than its competitors is its compatibility with Teradek's Bolt ecosystem, allowing you to transmit and receive video from any Bolt 500 or SmallHD FOCUS 500 transmitter/receiver.

Ace 500's transmitter and receiver are compact and super lightweight, and feature rugged aluminum and ABS plastic enclosures. The transmitter has an HDMI input, while the receiver offers an HDMI output. Both the TX and RX are powered by a 3.5mm barrel connector, with optional battery plates available in BP-9, LP-E6, NP-F, and BP U versions.
